

Multi PASS 16  
Wall mount version

Rear panel Multi PASS 16-R  
Rack mount version

## MULTI PASS 16 and 16-R

Multi PASS is a maintenance bypass to allow a UPS to be powered down and removed for service without disruption to the connected load(s).

Multi PASS has both manual and automatic transfer functions. If the UPS is accidentally disconnected or fails any load(s) connected to Multi PASS are automatically transferred to the mains supply.

Multi PASS is available in wall mounted or 19" rack mount formats.

Riello UPS supplies a wide range of external maintenance bypasses and switchgear for their UPS up to the 800kVA Master Dialog and for parallel systems up to 4,8MVA.

### CHARACTERISTICS

- wall or rack mount versions
- back-feed protection
- manual and automatic transfer functions
- mains power present LED indicator
- IEC, UK, Schuko and hard wired connected options.
